

Project Title:

"Policy & Claim Q&A Assistant for Insurance Advisors"

Problem Statement:

Insurance advisors in large organizations frequently face challenges in quickly accessing up-to-date information about policy details, claim procedures, tax implications, and regulatory changes. Traditional intranet portals or knowledge base systems are often cumbersome, poorly indexed, and hard to query in natural language. As a result, advisors spend a significant amount of time manually searching through documentation or waiting for responses from domain experts.

This delays customer service, affects decision-making speed, and reduces productivity.

Objective:

To build a **RAG (Retrieval-Augmented Generation)**-based internal assistant using **AI agents** that leverages the **Google Gemini 1.5 Flash API** to:

- **Answer employee questions in natural language**
 - **Retrieve relevant content from internal insurance policy documents**
 - **Support multi-domain knowledge** like life, health, auto insurance, and claim rules
 - **Explain tax implications and compliance details**
 - **Provide instant, accurate, and context-rich responses**
-

Target Users:

- Internal insurance advisors
- Customer support staff

- Policy sales agents
 - Claim processing teams
-

✓ Functional Scope:

- 🔍 Ask queries like:
 - *"What is the waiting period for pre-existing diseases in health insurance?"*
 - *"How can I file a claim for accidental car damage?"*
 - *"Are life insurance premiums tax-deductible?"*
 - 📄 Retrieve exact policy or regulation snippet from internal PDF documents
 - 🧠 Use multi-agent workflow:
 - **Query agent** → **Document retriever** → **Policy interpreter** → **Final responder**
 - 📁 Support for uploading or indexing internal documents (PDF, text)
-

✓ Tech Stack:

- 🧠 **Gemini 1.5 Flash API** (via Google API Key)
- 🔄 **LangGraph** for AI agent orchestration
- 🔍 **LlamaIndex** or **FAISS** for document retrieval
- 📄 Internal PDFs like:
 - "Health_Policy_Terms.pdf"
 - "Auto_Claim_Manual.pdf"
 - "Insurance_Regulations_2024.pdf"

-  **Google Colab** for development
-  **Streamlit + Ngrok** for secure internal web access
